

Agenda for Hershey

Intro's 9-915

RHEL 9:15 - 10:30 – [Dana Singleterry](#) and Billy Holmes

- What's new with RHEL 10
- What's new with Red Hat Satellite
- Conversation Questions

RHEL 10 lifecycle demo:

Ansible 10:30 - 12:30 — Raed

- What's new with AAP since 2.4
- AAP operator on OpenShift
- Conversation Questions

Ansible EDA workflow demo

Lunch 12:30 - 1:15

OpenShift 1:15 - 3:30 – Panindra and Mike Quick(Virtual)

- What's new with OpenShift 4.X
- Mutli-cluster management
 - OpenShift GitOps
 - ACM
 - OpenShift Lightspeed* (OLS)
 - ACS
 - Service Mesh
- Conversation questions

OpenShift demo

- OLS
- ACM*
- Service Mesh*

Notes:

OpenShift

Hershey has OpenShift primarily to just run MuleSoft. Nathan is looking for ways to better drive utilization on the cluster. It's important that they understand all of the capabilities they have today as well as the roadmap.

Ansible

Hershey uses ansible-core today. They have shown interest in AAP for networking in the past. We need to focus on all of the benefits of the platform to make them want to make the jump. I believe EDA has the potential to swing things in our favor. AAP operator for ansible management, and OpenShift consumption could interest them as well.

RHEL

Mostly RHEL 8 today, but very interested in RHEL 10 especially around image mode. Hershey also uses satellite for system management. I'm working on finding a resource that can talk in depth about Satellite.
