

1. How might we help them escape ballooning legacy virtualization costs?

- **Concrete Action:** Execute a lift-and-shift consolidation to migrate existing virtual machines away from expensive, legacy VMware environments while simultaneously providing a platform for containerizing applications 1, 2.
- **Primary Red Hat Technology:** Red Hat OpenShift Virtualization 1, 2.

2. How might we help them maintain security waivers for unsupported legacy applications?

- **Concrete Action:** Containerize aging Java applications that are currently running on unsupported CentOS 7 platforms to securely isolate them, helping PAC pass strict internal CrowdStrike cybersecurity audits 3, 4.
- **Primary Red Hat Technology:** Red Hat OpenShift and RHEL Universal Base Image (UBI) 3.

3. How might we help them eliminate manual database polling for infrastructure updates?

- **Concrete Action:** Replace the inefficient 5-to-10-minute manual polling loop in ServiceNow with asynchronous rulebooks that trigger playbooks the exact moment a change request reaches the "approved" state 5-7.
- **Primary Red Hat Technology:** Event-Driven Ansible (EDA) 7, 8.

4. How might we help them overcome a fragmented "roll-your-own" engineering culture?

- **Concrete Action:** Enforce strict DevOps guardrails by migrating teams to a standardized Configuration as Code (CaC) model, using GitLab as the single source of truth for dynamic infrastructure deployments 9-11.
- **Primary Red Hat Technology:** Red Hat Ansible Automation Platform 9, 11.

5. How might we help them reduce the technical debt of outdated, monolithic automation scripts?

- **Concrete Action:** Refactor massive, legacy Ansible Tower playbooks into smaller, modular workflows that utilize Red Hat-certified collections to ensure enterprise supportability and cleaner code 10, 12, 13.
- **Primary Red Hat Technology:** Red Hat Ansible Automation Platform 10, 13.

6. How might we help them securely deploy software to disconnected, mission-critical edge devices?

- **Concrete Action:** Package the operating system as an immutable, tamper-proof container for aircraft edge devices, allowing instant smartphone-like rollbacks if an update fails in the field 14, 15.
- **Primary Red Hat Technology:** RHEL 10 Image Mode and Red Hat Device Edge 14.

7. How might we help them resolve Configuration Item (CI) duplication and dynamic inventory sprawl?

- **Concrete Action:** Integrate network automation webhooks with NetBox so that adding a new device or changing a configuration context instantly provisions the infrastructure and natively updates the single source of truth 10, 16, 17.
- **Primary Red Hat Technology:** Event-Driven Ansible (EDA) 10, 17.

8. How might we help them standardize massive F5 load balancer infrastructures?

- **Concrete Action:** Replace manual load balancer administration by deploying modular playbooks for provisioning F5 Big IP nodes, route domains, VLANs, and self-IPs across their New York, LA, and London core sites 18-20.

- **Primary Red Hat Technology:** Red Hat Ansible Automation Platform 18, 20.

9. How might we help them modernize locked-down, air-gapped Media Content Services?

- **Concrete Action:** Automate the secure delivery of media content into highly restricted, disconnected environments by importing data through isolated, controlled pipelines 21, 22.
- **Primary Red Hat Technology:** Red Hat Ansible Automation Platform and Red Hat Satellite 21.

10. How might we help them future-proof their network cryptography against emerging threats?

- **Concrete Action:** Enable out-of-the-box, FIPS-compliant quantum cryptography at install time to secure the massive volumes of passenger and operational data flowing across new multi-orbit satellite networks 23, 24.
- **Primary Red Hat Technology:** Red Hat Enterprise Linux 10 23, 24.

11. How might we help them close the technical skills gap and speed up troubleshooting?

- **Concrete Action:** Deploy AI-assisted administration tools to help newer system administrators query logs, troubleshoot broken services (like SSHD), and generate automation scripts using natural language 25-27.
- **Primary Red Hat Technology:** RHEL 10 Command Line Assist and Red Hat Lightspeed 25, 26.

12. How might we help them eradicate fleet-wide vulnerabilities rapidly and without manual intervention?

- **Concrete Action:** Expand automation licensing across the 5,000+ host inventory to enable enterprise-wide, automated vulnerability remediation and patch management directly from dynamic inventories 28, 29.
- **Primary Red Hat Technology:** Red Hat Ansible Automation Platform 28.

13. How might we help them build cloud-agnostic portability for their refactored applications?

- **Concrete Action:** Provide a uniform container platform that prevents vendor lock-in, enabling PAC to effortlessly migrate refactored legacy workloads between Microsoft Azure, AWS, and on-premises environments 30, 31.
- **Primary Red Hat Technology:** Red Hat OpenShift 30.

14. How might we help them organically manage their Configuration Management Database (CMDB) without relying on faulty discovery tools?

- **Concrete Action:** Embed Configuration Item (CI) creation and deletion directly into the Ansible provisioning and de-provisioning workflows, ensuring the CMDB remains perfectly accurate in real-time 32.
- **Primary Red Hat Technology:** Red Hat Ansible Automation Platform (ServiceNow ITSM collection) 32, 33.

15. How might we help them simplify OS image creation across hybrid clouds?

- **Concrete Action:** Transition away from maintaining complex, manual golden images by defining the OS via DevOps pipelines, utilizing AI to recommend necessary packages during the build process 24, 34, 35.
- **Primary Red Hat Technology:** RHEL 10 Image Builder 34, 35.
